Introduction

AI assistants can help with writing, research, coding, and countless other tasks, but they can only work with what you give them. Clear communication — stating your goal, sharing relevant context, and saying what “good” looks like — is the single biggest factor in getting a useful response. This guide covers practical habits for communicating with AI more effectively.

Structuring Your Requests

A well-structured request is easier for an AI to act on correctly, and easier for you to review afterward. A few habits go a long way:

- **State the goal first.** Lead with what you want, not just background details.
- **Give relevant context.** Mention constraints, prior attempts, or examples that shape a good answer.
- **Break down complex asks.** Large, multi-part requests are easier to get right one step at a time.
- **Say what “done” looks like.** A concrete success criterion helps the AI know when it has actually answered your question.
- **Iterate.** Treat the first response as a draft — refine your request based on what came back rather than starting over.

These habits apply whether you’re asking a quick question or working through a longer, multi-step task.

Communicating with AI

Welcome to this guide on communicating effectively with AI assistants. Whether you’re asking questions, requesting help with a task, or collaborating on a project, how you communicate shapes the quality of the response you get back.
